

Installation Manual

Wall Safes VC

Thank you for purchasing this product from SafeGear.
Please read this manual carefully before using the product.

INSTALLATION INSTRUCTIONS FOR WALL SAFE SERIES VC

1. Take care that the safe is put inside the wall with sign „Top“ above. Don't put it reversed in, because the door will descend while it is open.
2. The safe has to be put in vertically and horizontally to the wall; take care that the doors stamp open in all positions; that means it shall not close or open by itself.
3. Fill in the wall opening with concrete. The concrete shall not be too wet. Tamp well!
4. After tamping is finished, possible cement inside the safe has to be put out. Close the door. Take it closed for 48 hours.
5. Open the safe for airing.
